

Interior Solutions for Public Buildings

CPD

Overview

When designing the interiors of public buildings it is critical to fully understand the materials that are being used. This presentation will review what gypsum is, how it performs and the implications of this in public spaces.

The CPD will cover sustainability, acoustics and composition. There will also be case studies and examples of where these products have been used in public buildings and why they were used.

This CPD will cover:

- Key legislation and applications
- Understanding of gypsum sustainability.
- Selection of acoustic products
- Acoustic calculations
- Which solutions and systems to use

What we offer

- Morning, lunch or Evening CPD's to suit your practice.
- One of our experienced Project Specification Managers will deliver a CPD in our architecturally focused design facility in Clerkenwell or at your office.
- Duration - 45 minutes
- Refreshments will be provided.
